USU

Fact Sheet

Experience the Future of IT Event Management

with the new USU Event Correlation App

Say goodbye to manual processes – welcome the era of automation

Set up precise rules to monitor incoming events and trigger actions automatically – like alerts or ticket creation. With a user-friendly interface and support for common communication protocols, our app integrates seamlessly into your IT infrastructure. This smart solution streamlines your IT processes with automated efficiency and intelligent event correlation. As a standalone module, it works perfectly with the USU platform and cloud technologies. Plus, its advanced container-based structure makes it ideal for SaaS applications.

Transform your event management with the cutting-edge USU Event Correlation App

Discover the latest innovation in event processing – designed specifically for IT and ZIS system administrators. With the USU Event Correlation App, you can take your network efficiency and responsiveness to the next level. →

Rule Definition Result (Summary)
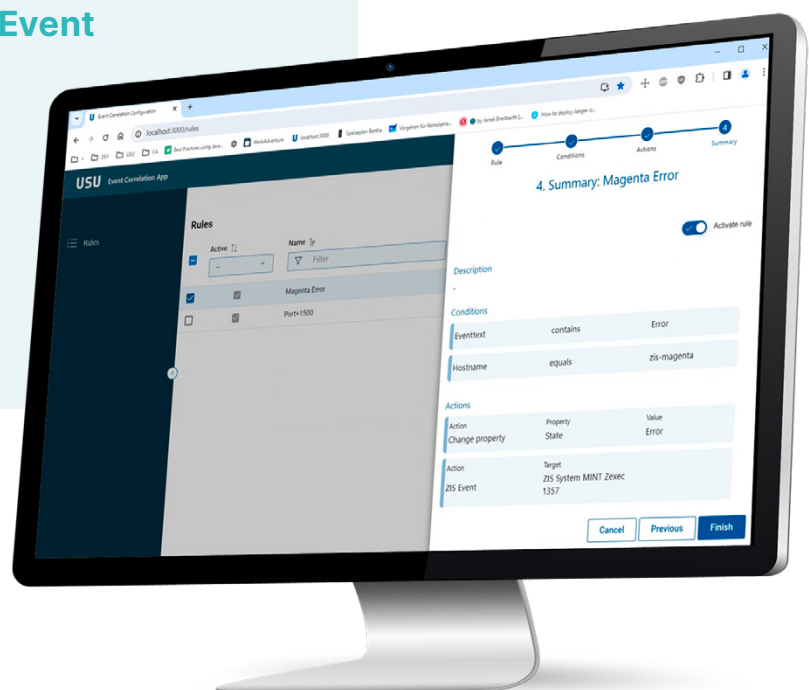

01 | **Simple rule design**

Use our user-friendly wizard to create custom rules quickly and easily. These rules analyze and correlate events in real time – triggering automatic actions when needed.

02 | **Full transparency**

Get clear, real-time insights into event processing with an architecture designed for high availability and scalability.

03 | **High scalability**

Our container- and cloud-ready architecture dynamically scales rule engines based on load – ensuring real-time event correlation and efficient management.

04 | **Optimized integration**

Seamlessly connect to various systems using standardized interfaces like OpenTelemetry, enabling smooth communication and improved interoperability.

05 | **Reliable and scalable**

Built on a robust Kubernetes cluster and tightly integrated with USU User Management, the app delivers a stable, scalable solution for your IT environment.

Enhance your IT monitoring and responsiveness with the USU Event Correlation App – your key to a more efficient and faster-reacting IT environment.

Main features

→ **Autonomous software**
Works independently of the ZIS system and seamlessly integrates with the USU platform.

→ **Distributed system**
Built with modern container technology, making it ideal for cloud-based SaaS solutions.

Advantages for your company

→ **Automated process optimization**
Automatically records and analyzes events to streamline workflows, reduce manual effort, and minimize human error.

→ **Improved responsiveness and security**
Detects patterns early to respond instantly to security incidents – reducing risks, downtime, and potential damage.

→ **Cost reduction through efficiency**
Automates monitoring and incident response, cutting operational costs by minimizing downtime and manual intervention.

Technical specifications

→ **Docker and Kubernetes**
Optimized container management for seamless performance.

→ **User-friendly ConfigFrontend**
Easily configure event correlation rules in just a few clicks.

→ **Intelligent RuleEngine**
The app's core ensures precise and efficient event processing.

Installation service

→ **Simple setup**
Get up and running quickly with support from our experts.

→ **Reliable assistance**
We're here to help – every step from installation to daily operation.

With the USU Event Correlation App, you get a powerful tool that boosts efficiency and helps prevent potential disruptions. Give your IT team access to advanced capabilities and see how it transforms monitoring, analysis, and response to IT events. Want to see it in action? **Contact us** for a personal consultation or demo and discover how our solution can optimize your IT operations
