

7 SaaS Management Sins to Avoid

How to reduce waste, improve visibility, and take control of your SaaS stack

01

Shadow IT & SaaS Sprawl

PROBLEM

Untracked apps across teams lead to security, compliance and cost risks.

Solution (USU Value)

Automatically discover all SaaS apps—even those purchased without IT approval.

Managing SaaS tools is harder than ever.

Without the right strategy and platform, organizations face overspending, security risks, and operational inefficiencies. Here are **7 common mistakes**—and how to fix them.

02

Wasted Spend on Unused Licenses

PROBLEM

You're paying for seats no one is using — or tools no one needs.

Solution (USU Value)

Identify and eliminate unused licenses with one click.

03

Lack of Central Visibility

PROBLEM

SaaS data is scattered across spreadsheets and portals.

Solution (USU Value)

Get a single dashboard for spend, contracts, usage and renewals.

04

Missed Renewals & Contract Chaos

PROBLEM

Auto-renewals and poor vendor oversight cost you money and leverage.

Solution (USU Value)

Track renewal dates, contract terms and usage to negotiate better deals.

05

Manual Onboarding & Offboarding

PROBLEM

Inconsistent user access creates security gaps and wasted spend.

Solution (USU Value)

Automate user provisioning and deprovisioning across all SaaS apps.

06

Security & Compliance Blind Spots

PROBLEM

Unapproved or risky apps can violate policies and regulations.

Solution (USU Value)

Enforce security policies (SSO, MFA) and monitor app risk from a central platform.

07

Scaling Without Strategy

PROBLEM

SaaS complexity grows faster than your ability to manage it.

Solution (USU Value)

Use a scalable, cloud-native platform that grows with your business.

Ready to take control of your SaaS stack?

USU SaaS Management helps you discover, optimize, and automate your entire SaaS environment—all from one intuitive platform.
